## Reliability Centered Maintenance RCM2™ Executive Overview

### RCM2™ Executive Overview

Maintenance management is often perceived as a cost center activity rather than one that leads to financial improvements. Leading organizations recognize that moving to an overall asset management approach using RCM2 principles can help drive optimal equipment performance which translates directly into bottom line business improvements.

#### Course Logistics

- Exclusive course at your facility
- Individual attendance at a public course hosted by The Aladon Network

This overview introduces executives to the intricacies of modern asset management so that they are best prepared to actively sponsor an asset performance improvement initiative. Roles and responsibilities within a reliability improvement initiative are examined and the keys to success are discussed along with the review of actual case studies.

RCM2, the standard in Reliability Centered Maintenance, and its derivatives are introduced. Discussions revolve around how these provide the framework necessary to develop a sensible and defensible asset management program. Physical asset management through RCM2 also forms the framework for a successful culture change for management, maintenance, operations and engineering. Correctly applied, RCM2 achieves greater safety and environmental integrity, improved operating performance and profitability, higher maintenance cost-effectiveness, and longer useful life of physical assets.

#### By participating you will:

- Be introduced to the fundamental principles of Reliability Centered Maintenance.
- Learn how reliability can contribute to your overall business success.
- Gain direction in how to best achieve improved and sustainable asset performance results.
- Have a better understanding of your role as an executive sponsor.
- Acquire knowledge to help make informed decisions in support of your asset management strategies.
- Learn how RCM2 supports your organizational goals and if desired certification ISO 55000.
- RCM2 enables the mandate for Corporate Social Responsibility.
